The Stripper[®] Spray Maintenance System

Spray away the costly "bumps & grinds" of galvanizing build-up

Galvanizing build-up is bad for job quality, production efficiency, and profits. But not if The Stripper's on hand. Special ingredients get right to work and dissolve galvanized build-up on rollers of forming machines and press dies. Then high quality lubricants take over to keep precision machines running smoothly... at peak efficiency... day in, day out.

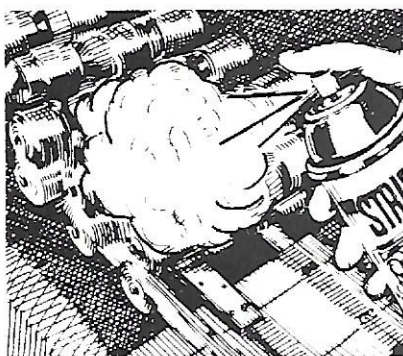

The Stripper...

An effective preventive maintenance system right at your fingertips.

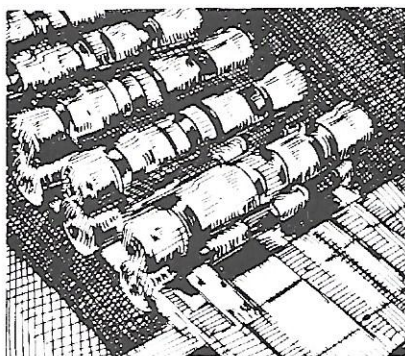

ITEM# 27147
12 13- OUNCE CANS
PER CARTON

Continued daily use of The Stripper not only prevents subsequent build-up but also keep your machines clean and smooth running thanks to special lubricating qualities.

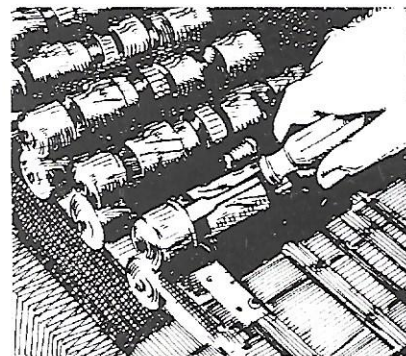

Here's How :

1. Spray The Stripper at those points where galvanizing tends to build up on your machines. The special cleaning ingredients get right to work softening up deposits.

2. Under normal conditions, galvanizing build-up will loosen and flake off by itself after being sprayed with The Stripper.

3. Then if required, remaining build-up can easily be removed by slight scraping.
